

Weekly Anemia Clinic started on 1st April 2022

We started the financial year 2022-23 by a new community clinic: Anemia Clinic.

This clinic is aimed at improving the status of anemia in the population residing at Sunder Nagri.

Patients belonging to all age groups identified in the field or at other clinics, are called to this clinic, where Hemoglobin test is done, and detailed clinical assessment is done by doctors.

Detailed and personalized counselling is given to all the patients addressing their specific concerns regarding nutrition and practices. General health education is also given using informative flex.

Patients are also informed the date of follow up and emphasis is given on adherence to the treatment and nutritional practices.
